

Setup JBoss with Apache SOAP

by Michael Maretzke

Introduction

This HowTo explains the configuration steps to enable SOAP / WebService technologies on JBoss Application Server.

Installation

Major software products involved:

- JBoss Application Server Version 3.0.0 (jboss-3.0.0_tomcat-4.0.3.zip)
- Apache SOAP Version 2.3.1 (soap-bin-2.3.1.zip)

Prerequisites

- Up and running installation of JBoss application server.

Installation of Apache SOAP package into JBoss

- Unzip the package soap-bin-2.3.1.zip to a temp directory
- Copy soap-2_3_1libsoap.jar to
d:\jboss-3.0.0_tomcat-4.0.3\server\default\lib
- Copy soap-2_3_1webappssoap.war to
d:\jboss-3.0.0_tomcat-4.0.3serverdefaultdeploy
- Restart JBoss and you're finished.
- Test installation by navigating to: <http://localhost/soap>
